

# 100% STEAM CLOSE LOOP

Generates 10 to 30% Energy Savings & Maintenance Savings

## ENERGY SAVINGS

- The Flooding Design of the HX Extracts Latent & Sensible Heat in Each Pound of Steam
- No More Flash Lost Through Vents
- No More Deaerator. Just a Feed Water Station
- Almost No More Surface Blowdown on Boilers
- Better temperature control
- Possibility to have a Condensing Economizer
- Possibility to Generate Electric Power

### Custom Fabrication

Every system is designed accordingly to your conditions of operation and for your special needs.

## MAINTENANCE SAVINGS

- No more pressure reducing valve stations
- No more steam safety relief valves
- No more dedicated condensate pump stations
- No vacuum breakers in operation. We don't inject O2 in condensate return. 6 times less corrosion.
- No Emergency Care on Steam Leaks
- Only 1/2" control valve up to 10 MMBTU process
- No Vents to the Roof. Just in the boiler room.

### Building Automation

We provide complete control system. BTU meter is included. BacNet and ModBus protocols.

### Team Work

Our engineering department works closely with customers to achieve success on every project.

Complete Solution in a weather proof enclosure
